1. **What do you need?**

- a HDMI to HDMI cable
- a keyboard and a mouse
- a screwdriver and screws
- a wifi and bluetooth module
- a 12V 3A power supply
- a M.2 SSD hard drive

2. **Mounting of the wifi and bluetooth module (with the M.2 SSD)**

   1. Place the wifi and bluetooth module using screws and a screwdriver
   2. Stick the antenna to the A connector (1)
   3. Place the M.2 SSD hard drive on the higher connector. It should be on top of the first module (using screws and a screwdriver)

3. **Prepare your board**

   1. If your board is booted correctly this light turns green
   2. Plug keyboard and mouse
   3. Power up the board using a 12V 3A power supply
   4. Connect your monitor via a HDMI cable

Your UDOO X86 is now ready to use!
